

Cell Phones, Reading This Could Save Your Life

According to the following, this is not entirely true:

http://urbanlegends.about.com/library/bl_cell_phone_electrocuted.htm

Even if this is not entirely true, if it saves one, we did well adding this to our site.

This E-mail message originated from the University of Miami Hospital in Miami, Florida and is good advice. This shows what a Cell Phone can do if it is being charged.

Never do this! Tell all your friends, "UNPLUG THE CHARGER, if they plan to use their Cell Phone".

We usually charge our phones, most of the time during the night, but occasionally while we are driving, we will use the plug in the car charger. Definitely unplug it in the future.

A few days ago, a person was recharging his mobile phone at home.

Just at that time a call came in and he answered it with the charging instrument still connected to the outlet.

After a few seconds electricity flowed into the cell phone unrestrained and the young man was thrown to the floor with a heavy thud. As you can see, the phone actually exploded.

His parents rushed to the room only to find him unconscious, with a weak heartbeat and burnt fingers.

He was rushed to the nearby hospital, but was pronounced dead on arrival.

Cell phones are a very useful modern invention.

Since sending this out, I have received many emails saying it is rather harsh to call Cell Phones "Instruments of Death". If it happened once, they are. Better safe than sorry.

Be Safe. Never use Cell Phones while they are charging and hooked to the electrical outlet! If your charging your Cell Phone and a call comes in, unplug it before you answer it.

**FORWARD THIS TO THE PEOPLE THAT MATTER IN YOUR LIFE.
Whether or not they have a Cell Phone, they can inform others who do.**
