

VIRUS ALERT: TR/ Patched CB Virus

December 23, 2010. Written and posted by Webmaster Scott

Patriots as you know my computer was down just a few days ago for some time. I noticed changes being made to my Desktop and other things that just were not right.

I took it to a local business here in Pittsburgh, Computer Troubleshooters 2199 West Run Road, Munhall, PA. 15120; (412) 462-3400; service@ct-pgh.com. They fixed it for me at a great price, accepting a coupon, and did a wonderful job cleaning and replacing files that were moved and deleted.

I urge you to update your Anti-Virus Programs as much as you can. Run the most comprehensive scan you can as much as you can.

Webmasters Note:

With our Department Website growing, I appreciate those who make their own documents that they wish published. It takes some time to make these documents, time I just don't have to make them all. Not to mention you'll get it on the Website faster for I won't have to set it aside, make it later when I have time, email it back to you, ask your approval and wait for the okay from you to publish it. Some stories with no time sensitive properties I can put aside and do at a later date.

I **no longer** accept emails with only a Website Address or Link. Many of you and I have gotten a Virus that sends out Links to Medicinal Sites and Stores. This one copies your Contact Folder and emails the Links to all of them. Please put yourself in your contacts so you will know when it happens. Again, if you Update and Comprehensively Scan your computer regularly we all will have a better internet experience.
